# Working on Edge Partitioner

- ▶ I have been working on the new solution to deal with empty cells. It is currently working however I have found some minor issues:
  1. A cell can be intersected by more than one Polygon's envelope so I test all of them if required.
  2. Extract the Polygon's envelopes cannot be (easily) done at the moment of edge partitioning because it is done internally by GeoSpark.
  3. I am currently debugging some issues related with faces, holes and multi-parts.
